Subject RE: Me again...

Dead goose/raccoon!? Sounds like a wild party...

We'll include the following study finding for this site : Dead Geese and Raccoons in Swimming Pools Cause High Lead Levels...

Thanks much for the confirmation on these sites!

Thanks for the list – they are slightly different than the listing I had previously.

Interesting – Feb 29 2012 #12 had a 311 call for to dig the street and repair a broken main. The repair was completed Mar 7<sup>th</sup>. Other than that, nothing. A call came in yesterday to 311 for #12 - the neighbor is complaining that the pool hadn't been drained in 3 to 4 years and had a dead raccoon and goose floating in it – may be indicative of a vacant or little-used home – probably low water usage.

At (b) (6) down the street, there was a broken main repaired in 2000, but there is no way that disturbances from 12 years ago are affecting lead numbers now. At (b) there was a leak in the parkway in 2008, at (b) there was a leak in the parkway March 2011. Seems to me that in general, that (relatively young) water main is in general leaky and could very well have been leaking during the sampling period.

As for #21, the second floor of (b) (6), nothing. Just lots of catch basin cleaning on the sewer side.

Going through my email, I saw an old email as I was going through stuff that I am not sure I responded to you regarding the final sample site IDs and addresses. In case I didn't, attached is the info. I left it in Word so you can cut/paste, if needed.

I also can't recall if I asked about potential disturbances at sites 12 and 21. These sites are unmetered and there was nothing listed in the spreadsheet in the way of WD work for these sites, but the sampling profiles are similar to some other sites where work has been done (water dept or other street excavation).

Subject: Question on Phosphoric  
Greetings!

Hope the NATO stuff didn't put you folks out too much. I figured I'd leave you alone during that headache...

Quick question for you folks - I should be done writing up the draft study this week, but I have a few holes to fill. When did you go on-line with phosphoric at the South and Jardine plants (month/year is fine).
